Approximate Cost:

\$3,500.00

Description Of Work:

We had the second floor of our house sprayed with open cell foam by GCS. We were in the process of putting in a master suite on the second floor of our craftsman house in the Virginia Highland section of Atlanta. We met Michael at the Dogwood Festival, and he promptly responded to our request for an estimate. The estimate was significantly less than the others that we got. The work was professional, neat, and they cleaned up and left the site broom swept. We couldn't be happier with the finished product. They are professional, knowledgeable, and easy to work with.

Member Comments:

The team came on the day that they were scheduled, and stayed until the job was done.

They took care to prepare the space, covering window, and openings to the floor below.

We contracted for 3 1/2 in the walls and 5 in the roof, and it was filled to at least that amount, and properly shaved so the sheet rock will install easily. I wish all of our vendors on this project were this professional and easy to work with.

Yes

Approximate Cost:

\$5,000.00

Description Of Work:

GCS removed the old insulation in the attic and crawl spaces and then installed spray foam in all the spaces. The process took a couple of days. The downside is we needed to be out of the house while they sprayed and for at least 24 hours after the spraying was done. Especially since we have young children.

Member Comments:

The whole process went fairly smoothly, the workers were efficient and professional. They showed up on time and started work. They finished in 2.5 days and the end result looks good.

Approximate Cost:

\$10,000.00

Description Of Work:

We had contracted with GCS to help us perform some energy efficiencies in our 1930's home in East Atlanta. In their findings they were able to determine that our house was pretty null on being efficient. We knew there was no insulation in the upstairs which made things worse but they performed an initial audit to find out exactly what needed to be done and help out with any rebates offered by the city and power companys. Shane Matteson was our contact and the following was identified to help us reach our maximum efficiencies.1. Install High Quality weatherstripping and door sweeps on leaky doors2. Installed open cell sprayfoam insulation along entire roofline and gables.3. Installed closed cell insulation along the subfloors4. Caulk and seal around all fireplaces and leaky windows5. Seal off plumbing penetrations under sinks and toilets with expanding foam6. Clear caulk along bottom of baseboards on exterior walls7. Install insulated water heater blanket over tank and pipes8. Use metal tape to seal around all supply and registers in home.9. Use tape and mastic to seal all supply line takeoffs to plenums on both systems to maximize efficiency of ductwork.10. Upgrade incandescent bulbs to CFL or LED

Member Comments:

Making all of these improvements have made a huge difference in comforts and utility bills. We made all of these changes. Shane worked with us on obtaining about \$4000.00 in rebates bringing our total cost under what we budgeted which was about \$7K. In July 2011our electric bill was close to \$700.00 for the month. This July 2012 being the hottest on record our bill was just a little over \$300.00. It was more than a 50% difference. The house has maintained a comfortable level, we continue to see the energy bills drop and the savings add up. The investment was definitely worth it!! Shane and his team at GCS

Description Of Work:

I received an estimate from GCS Spray Foam Insulation for insulation, on 15 August, 2011.

Member Comments:

They were professional and came promptly. They were quick to respond and did a great job. The only reason I didn't go with them was that, I got a better deal, elsewhere. They were very informative and extremely knowledgeable. They were very friendly and did a good job. I liked their services and will

contact them in future.

Description Of Work:

They sprayed Open Cell foam 5.5 inches deep in the roof line. This included Flashing the 2 X 6 rafters to seal in the airtight thermal seal.

Member Comments:

Jameson came to my house and rental house to do estimates for Spray foam. He was very knowledgable and answered all my questions. Sometimes even late into the evening. He helped me understand the different types of installations and value including fire suppression. I was sold.

Alex (Shooter) and Juan (Support) came to my house on time and ready to work. You can tell these guys are pro's. They laid out the planned installation and got started. My house is a complicated roofline with many turns and twists. This barely slowed them down. I can't believe how quickly Alex worked with the Hot Georgia sun beating down on the roof. It must be 165 degrees up there. Please be careful of your workers while they are on the Job site. Bring them lots of ice water. They will be very grateful. It is also customary for the shooter to take several breaks to get out of the heat. Its built into the price of the installation so don't worry. You want your shooter to have his head clear. This is very hard work. Think Gymnast with a Gas Mask.

Both Alex and Juan were trustworthy and I left them alone in my home. You don't want to be in the house while they are shooting. The smell is not good. Open windows helps remove the fumes.

I definately noticed how quite the house is to outside noises. I live on an airport and the airplane noise is definately reduced. The thermal properties were definately enhanced but it will remain warm in the Attic for a while. The spray gun puts out a lot of heat and your new thermal barrier will hold onto it until your air conditioner has a chance to get ride of it thru the ceiling.

Juan cleaned up the house after they were done. Nice job.

I would definately use GCS Spray foam again. I will leave my name and number with Jameson as a reference. Job well done.

Description Of Work:

We had spray foam insulation placed in our 1961 ranch house attic - whole house including garage.

Member Comments:

First and foremost, spray foam insulation is a great idea, and after just a few days we are feeling the difference. Indeed, our HVAC repairman first recommended we try spray foam insulation to help our heating and cooling issues. We chose GCS because of the professionalism of their sales manager,

Michael Gurwitch, and their can-do attitude. Our project was extremely difficult, involving some very tight spaces. The spray they used, LaPolla, worked very well and comes highly recommended on the Internet. The real stars were the technicians. The team, led by Joey Henderson and his colleague A.J., was extremely professional and hard-working. A.J. said it when he first arrived - "We'll get 'er done." And they did. It took longer than originally anticipated because of some structural challenges, but it was not because of lack of trying on the team's part! Following their insulation, they also checked the HVAC and made some additional recommendations about things we can do to conserve energy. Overall, I highly recommend GCS.
